DESCRIPTORS: *Soil mechanics, *Clay, Adhesion,

The "moisture of capillary saturation" is a character-
istic property of the soil. There exists a distinct
correlation between the "moisture of capillary satura-
tion" and the Attenberg limits. Determination of the
Atterberg limits by the "moisture of capillary satura-
tion" method is much shorter than the rolling method
and determination in Casagrande's apparatus. (Author)

A volumetric procedure was devised for determination
of sulphates in the spinning bath and effluent liquor,
and for use during complete analysis of the spinning
cake. The method makes possible the determination of
sulphates with an error not more than 1 or 2%. (Author)
